=====
Comment: CSS preprocessors
in the css file,

Firstly,I use some css feature, such like @keyframes stretch {} and body,html {} to implement the effect of animation. In this assignment, I apply the change size and colour ball to fulfil the animation requirement.

Secondly, I use the css @media to implement the requirement of retina.

Thirdly, I use bunch of size and position limitation in the css to control and change and effect after change the size of the windows.

=====
Comment:HTML5 and CSS3

In the HTML5, I use a lot of different tags, and as being professional, I didn't use <div> for every separate purpose, instead, I apply all the professional and proper tag for each one.

In the CSS3, I use the proper limitation as well, such as top and padding top will have the same effect some time, but I apply the most suitable attribute.

=====
Comment: jquery and xml

In the javascript, I use the jquery instead of xml to get the json.

=====

Comment: color

for the colour part, I didn't write then solid blue or solid red all the time. instead, I search the css colour code and the apply the better visual feeling to the people who visit my website.

=====

Final comment, I will all the requirement and the bonus requirement for this assignment.
